The creation of the Institute of Theoretical Chemistry of the Universitat de Barcelona (IQTCUB) was approved on November 27th, 2007. The IQTCUB members are professors and researchers from different departments of the Chemistry and Physics faculties of UB who employ methods of Computational Chemistry and/or Computational Physics (e.g. Quantum Chemistry, Solid State Modeling). The IQTCUB research activity focuses mainly in the field of Chemistry. Yet, this activity is quite different from what one expects from a traditional chemist. Indeed, the instruments used by the IQTCUB members cannot be found in a typical chemical laboratory but rather in a virtual “computational laboratory” with supercomputers having hundreds or thousands of processors. The main goals of Theoretical and Computational Chemistry are: to achieve a detailed understanding of chemical process at the molecular level, to suggest new experiments by means of predictions that have to be experimentally proven, to interpret and provide a rationale of complex experimental results, and to devise new tools and concepts. Following these general objectives, the IQTCUB aims to design new materials and drug molecules with tailored properties, investigate new chemical reactions to obtain key products with improved efficiency and selectivity, to improve existing processes with respect to efficiency and environmental impact, and to propose new sources of sustainable energy. Although most of these goals are common to other scientific disciplines (given the interdisciplinary approach of modern research), the insights provided by theoretical and computational chemistry are unique and cannot be obtained with other methods. Therefore, the tools developed and employed in IQTCUB play a prime role in solving many pressing challenges faced by modern society.

This has been another difficult year for research budget in Spain and the support from UB through the research deputy has been invaluable. This is fully acknowledged by all personnel of the institute who otherwise could not carry out this research. In fact, without the support from the institution it would be impossible to maintain the computational infrastructure, which is essential to carry out a high-quality and competitive research. This is also thanks to the, often invisible, excellent technical staff that is responsible for keeping the whole computational framework working. This activity report evidences the IQTCUB vitality and growth over almost ten years, the considerable scientific production in research lines as diverse as drug design, heterogeneous catalysis, nanostructures, novel materials, and atmospheric chemistry clearly demonstrates the growing impact of our research. We do hope that the IQTCUB project will continue to deserve the support of our university in the years to come. This will certainly be essential to further improve the scientific quality of IQTCUB, which was recently recognized by external peer review evaluation. This year has also been marked by elections for the UB President and we hope that, based on this memoir, the new team will continue with the compromise with the IQTCUB.

Francesc Illas
Director de l’IQTCUB

I. IQTCUB OVERVIEW

The Institute of Theoretical and Computational Chemistry of the Universitat de Barcelona (IQTCUB), was created by the university Government Board on November 27th, 2007, with the main goal of enhancing and supporting scientific research in Theoretical and Computational Chemistry at the Universitat de Barcelona by organizing the research in four main lines and promoting and supporting interdisciplinary activities which will allow to tackle the new challenges in this scientific discipline.

I.1 DIRECTION TEAM

Prof. Francesc Illas Riera  Director
Prof. Ramón Sayós Ortega  Treasurer and Secretary
Prof. Carme Rovira Virgili  Board member
I.2 IQTCUB RESEARCH LINES

Scientific research currently being carried out at the IQTCUB can be viewed as classified in the following four main research lines.

1. **Methods, algorithms and computational tools development**
   Here we focus on theories and algorithms devoted to account for electronic correlation, nuclear motion, quantum structure-activity, continuous symmetry measures, molecular modelling, variational state transition theory and magnetic resonance. Further developing of Monte Carlo, molecular dynamics and Brownian dynamics is also envisaged.

2. **Computational Materials Science**
   In this research area we employ computational methods, ranging from high-level quantum chemistry and ab initio molecular dynamics to classical simulation methods, to investigate the bulk, surface and nanoscale properties of a broad class of solid materials, such as complex inorganic compounds, molecular crystals and heterogeneous catalysts.

3. **Computational Biochemistry and Soft Matter**
   Using the arsenal of available computational methods, from electronic structure based methods to classical simulations, we focus on systems of biological interest. In particular we investigate the structure and reactivity of proteins and enzymes, drug design, processes in cellular membranes, enzymatic reactions in crowded media and soft nanoparticles in solution.

4. **Reactivity and Reaction Dynamics**
   Research in this area uses quantum, classical and statistical mechanics methods to analyse the dynamics of elementary reactions, electronic excited states and atmospheric and combustion reactions. Continuum methods are also used to investigate macromolecular complexation reactions in aqueous media.
I.3 IQTCUB MEMBERS

IQTCUB involves a total of 96 professors and researchers: The full list of members of IQTCUB (including the corresponding academic situation and affiliation within UB) is provided below.

I. IQTCUB OVERVIEW

Distribution of IQTCUB members according to the professional category.

I.4 TECHNICAL STAFF

Apart from the academic and research personnel whose main activity is scientific research in theoretical and computational chemistry at IQTCUB, two technical staff members take care of maintenance of the computational infrastructure, their work is extremely important since they also implement the codes and optimize their performance.

Jordi Inglés Camats  
**System Administrator Manager**

Teresa Arenal Porcel  
**System Administrator**
I.5 EQUIPMENT

Currently, the IQTCUB computational facilities consist of seven calculation clusters located in two conditioned rooms of the Chemistry Faculty of UB. All the clusters except iqtc06 are located in a room near the garage of the faculty where two air conditioning machines of 47,000 and 66,000 KW cool it respectively. Iqtc06 and Iqtc07 are located in a room called VAX, which is cooled by an air conditioner machine of 30,000 KW and another two of 9.000KW.

I. IQTCUB OVERVIEW

iqtc03 (invested value 33.000 €)

*Machine type*  HP cluster  
*Operating System*  SLES10  
*Services*  Calculation cluster  
*Structure*  11 nodes  
*Notes*  64 bits processors. Merged with iqtc02 cluster

*Specifications:*

**11 INTEL HP ProLiant DL140 G3 nodes**  
CPU: 2x2.33GHz Xeon QuadCore  
RAM: 16-32GB  
HD: 2x80GB hard disk  
Network: 2 gigabit network card (calculation network) + 1 ILO card (OOB)

iqtc04 (invested value 460.000 €)

*Machine type*  HP cluster  
*Operating system*  SLES11  
*Services*  Calculation cluster  
*Structure*  101 nodes  
*Notes*  64 bits processors. Infiniband network

*Specifications:*

**95 INTEL HP ProLiant DL160 G6 nodes**  
CPU: 2x2.66GHz Xeon SixCore  
RAM: 48GB  
HD: 1x1TB hard disk  
Network: 2 gigabit network card (internal data network) + 2 infiniband network (calculation network) + 1 ILO card (IAM)

**4 INTEL HP ProLiant DL160 G6 nodes**  
CPU: 2x2.66GHz Xeon SixCore  
RAM: 48GB  
HD: 4x500GB hard disk  
Network: 2 gigabit network card (internal data network and calculation network) + 1 ILO card (OOB)
2 INTEL HP ProLiant DL160 G6 nodes
CPU: 2x2.66GHz Xeon SixCore
RAM: 48GB
HD: 1x500GB hard disk
Network: 2 gigabit network card (internal data network and calculation network) + 1 ILO card (OOB)

iqtc05 (invested value 32.000 €)

Machine type SGI Cluster
Operating System SLES11
Services Calculation cluster
Structure 4 nodes
Notes 64 bits processors

Specifications:

4 AMD SGI H2106-G7 nodes
CPU: 4x2.3GHz Opteron 6276 16-core
RAM: 256GB
HD: 2x1TB hard disk
Network: 2 gigabit network card (calculation network) + 1 IPMI card (OOB)

iqtc06 (invested value 420.000 €)

Machine type Heterogeneous Cluster
Operating System SLES11
Services Calculation cluster
Structure 28 nodes
Notes 64 bits processors

Specifications:

25 INTEL HP ProLiant DL560 Gen8 nodes
CPU: 4x2.2GHz Xeon OctoCore
RAM: 512GB
HD: 2x300GB hard disk
Network: 4 gigabit network card (calculation network) + 1 IPMI card (OOB)
Network: 2 10gigabit network card (internal data network)
I. IQTCUB OVERVIEW

7 INTEL Supermicro SuperServer 8017R-TF+
CPU: 4x2.3GHz Xeon OctoCore
RAM: 512GB
HD: 3x1TB hard disk
Network: 2 gigabit network card (calculation network) + 1 IPMI card (OOB)
Network: 2 10gigabit network card (internal data network)

iqtc07 (invested value 40.000 €)

Machine type       Supermicro Cluster
Operating System   SLES12
Services            Calculation cluster
Structure           2 nodes
Notes               64 bits processors

Specifications:

2 Supermicro 2048U RT4 nodes
CPU: 4x2.6GHZ Intel Broadwell 10Core
RAM: 512GB or 1TB
HD: 1x1TB hard disk
Network: 4 gigabit network card (calculation network) + 1 IPMI card (OOB)
Network: 2 10gigabit network card (internal data network)

GPU cluster (invested value 47.000 €)

Machine type       Heterogeneous Cluster
Operating System   SLES11, centos 7
Services            Calculation cluster with GPUs
Structure           5 nodes
Notes               64 bits processors

Specifications:

Node
CPU: 1x3.06GHz Intel Core i7 950
RAM: 16GB
HD: 1x1TB hard disk
Network: 1 gigabit network card (calculation network)
GPU: 1 NVIDIA GTX580, 1 NVIDIA GTX480
**Node Tyan FT72B7015**  
CPU: 2x2.66GHz Xeon SixCore  
RAM: 48GB  
HD: 1x500GB hard disk  
Network: 4 gigabit network card (calculation network) + 1 IPMI card (OOB)  
GPU: 8 NVIDIA GTX580

**Node**  
CPU: 1x3.30GHz AMD FX-4100 QuadCore  
RAM: 16GB  
HD: 1x1TB hard disk  
Network: 1 gigabit network card (calculation network)  
GPU: 1 NVIDIA GTX770

\textit{Specifications:}

1. **1 AMD HP ProLiant DL385 node**
   - CPU: 2x2.2GHz AMD Opteron 275 Dualcore
   - RAM: 4GB
   - HD: 6x146GB hard disk
   - Network: 1 10/100 network (external network) + 1 gigabit network (internal network)

\textbf{OTHERS}

The IQTCUB have other services to provide service to the IQTCUB's users.

1. Backup server DELL R515 (backup server with 4TB of disk capacity connected to a UPS).
2. Tape library server HP MSL4048 (48 tapes with approximately 48TB of space, \textsim 1TB/tape).
3. Administration server (laptop with 3 network cards for critical incidences support).
4. Proxy server (server that allows the access to the public network from IQTCUB's network).
5. Switch Layer 3 HP Procurve with 24 ports (used for the IQTCUB's date centre infrastructure).
6. 8 Switchs Layer 2 Dlink with 48 ports (internal network for cerqt2, iqtc01, iqtc02, iqtc03 clusters).
7. 4 Switchs Layer 2 HP with 48 ports (internal network for iqtc04, iqtc05 and iqtc06 cluster).
8. 3 Switchs Infiniband Voltaire with 36 ports (calculation network for iqtc04 cluster).
I. IQTCUB OVERVIEW

9. Modular switch HP (8 calculation network modules for iqtc01, iqtc02, iqtc03 clusters).

10. 2 Modular switch HP 10GB (calculation network for iqtc06 and data network for the glusterfs servers).

The approximated invested cost of this equipment is 50,000 €.

SUMMARY

Cores ........................................... 3406 c
Memory ...................................... 24.736 GB RAM
Calculation disk capacity ............... 178 TB
Data user disk capacity .................. 32 TB

The invested amount, considering also the consumables such as network cables and other material is approximately

1.863.000 €*

*This value does not include the cost of the air conditioning machines and electrical panels.

One of the clusters for intensive calculation in the IQTCUB.
II. IQTCUB ACTIVITIES

II.1 GENERAL ACTIVITIES

Next, a description of activities and actions promoted by IQTCUB through 2016 is provided.

a. *Promotion and encouragement of research.* This year the IQTCUB has finally offered three contracts (around 2000 € per contract) aimed to help students to initiate a scientific career. These contracts are addressed to students about to end the degree and aimed to cover a six month period to facilitate the student to pursue an official Master at UB as well as collaborating in some of the research projects of the IQTCUB groups. The contract has been awarded to Lorena Vega Domínguez, Xavier Marugán Ferrer and Enrique Fortín Foz for starting Master studies under the supervision of Drs. Francesc Vinyes, Pere Alemany and Francesc Mas, respectively.

*Total cost: 6,246 €*
II. IQTCUB Activities

b. 7th IQTCUB workshop. This one-day workshop aimed at the dissemination of the research done at the IQTCUB took place on July 10th, 2016 at it was organized by Prof. Mercè Deumal and Dr. Jordi Cirera. The IQTCUB members and internationally acknowledged speakers present the most recent work. This year we highlight the participation of Prof. Walter Thiel from the Max-Planck-Institut für Kohlenforschung with the invited lecture entitled *Surface-hopping excited-state dynamics*, Dr. Jorge Echeverría (*Single molecule motors working on surfaces*), Dr. Rosendo Valero (*Nomad, the novel materials discovery laboratory*), Dr. Gábor Kovács (*Versatile optimization of Chemical ordering in bimetallic nanoparticles*) and Lluís Raich (*Thiolate-protected gold nanoparticles: structural properties and reactivity*) from the University of Barcelona and IQTCUB, and Dra. Annapaola Migani from the Institut Català de Nanociència i Nanotecnologia (*Theoretical study of heterogeneous photo-catalysis*). Moreover, 19 poster contributions have been presented during the meeting. The IQTCUB assigned a budget to cover the traveling and lodging expenses of Prof. Walter Thiel, the transport expenses of Dra. Annapaola Migani as well as the catering service offered to all assistants.

Total cost: 1.503 €

Panel of the 7th IQTCUB workshop.
c. **6th Introductory course in Computational Chemistry.** The main goal of this course organized by Profs. Fermín Huarte and J. Carlos Paniagua members of the Materials Science and Physical Chemistry Department and the IQTCUB, is to initiate chemistry undergraduate students in the possibilities of Computational Chemistry. The course takes place during a whole week and is mainly addressed to Chemistry and Chemical Engineering students at the University of Barcelona. The 2016 edition has been the sixth one and has been very successful with over 40 students requesting to participate. The different issues exposed along with the teaching staff involved in each session was the following:

1. *Introduction to Linux*, Oriol Lamiel and Gerard Alonso (UB, IQTCUB).

Total cost: 250 €

Panel of the 6th Introductory Course in Computational Chemistry held in 2016.

Some pictures took in this year sessions of the Introductory Course in Computational Chemistry.
d. **5th Advanced Course in Computational Chemistry.** Fuelled by the positive feedback received from the students in the previous editions we have offered again this year a course at a more advanced level with the main goal of improving previous knowledge in use of computers and, in particular, on Computational Chemistry. Profs. Jaime Rubio and Miguel González from the Materials Science and Physical Chemistry Department of University of Barcelona and IQTCUB have organized the course that has been held in July 4th to 8th. The participants in the course are usually students who have taken part in the Introductory Course or Chemistry undergraduates who have followed a Quantum Chemistry course. In this edition 15 students performed the registration: B. Oró, E. Boldú, M. Camats, B. Martínez, J. Marínoso, A. Pla, J. Dalmau, M. Garçon, M. Ribas, A. Garcia, C. Privat, J. Bonet, D. Vidal, M. Delgà and J. Sans. IQTCUB has covered breakfast catering expenses of all participants.

*Total cost: 240 €*

The different issues exposed along with the teaching staff have been the following:

1. **Drug design,** Prof. Jaime Rubio (UB, IQTCUB).

3. **Kinetic Monte Carlo simulations in heterogeneous catalysis,** Prof. Ramon Sayós and Hèctor Prats (UB, IQTCUB).

4. **Enzymatic reactions: QM/MM,** Prof. Rodrigo Martínez Ruiz (Universidad de La Rioja).

5. **Excited states,** Prof. Mercè Deumal (UB, IQTCUB).

6. **Introduction to SGE,** Jordi Inglés and Teresa Arenal *(IQTCUB computing technicians).*

7. **Solid state,** Profs. Iberio Ribeiro and Miquel Llunell (UB, IQTCUB).

8. **Fortran 90,** Prof. Miquel Llunell (UB, IQTCUB).
II. IQTCUB ACTIVITIES

Panel of the 5th Advanced Course in Computational Chemistry held in 2016.

Pictures showing the students that shared the Advanced Course in Computational Chemistry and their visit to the Mare Nostrum supercomputer (BSC).
e. **IQTC Internal Seminars.** In April 2016 started the periodic *IQTC Internal Seminars* in order to disseminate the different research lines of the IQTC groups. The organizers of these seminars are the Ph.D students Isaac Alcón and Manel Mondelo together with Prof. Francesc Illas, all of them members of the IQTC and the Materials Science and Physical Chemistry Department of the University of Barcelona. Here it is the list of the seminars held during 2016:

1. *Towards a first principles description of realistic models of TiO$_2$ nanoparticles.*
   Oriol Lamiel, april 29, 2016.

2. *Twist is all you need.*
   Isaac Alcón, april 29, 2016.

3. *Catalysts for green chemistry.*
   Sergi Posada, june 17, 2016.

4. *How does the coordination affect the low lying minima in inorganic clusters.*
   Andy Cuko, june 17, 2016.

5. *About a pedagogical approach to DFT.*

6. *Time-scale separation of confined and free motions in the H @ SWNT system.*
   Manel Mondelo, october 14, 2016.

7. *Reactivity insights inside the amylosucrase. When occurs the polymerization?*

   Alberto Figueroba, november 18, 2016.

   Tomaso Francese, november 18, 2016.
f. **Scientific Dissemination Activities.** Prof. Xavier Giménez Font maintained the online dissemination blog entitled *Chemistry, Air and Environment*, in the magazine *Investigación y Ciencia*. In this blog, it is quite common to find references to the activity and novelties of the research performed by IQTCUB groups. During 2016 the following articles have been published:

1. *From chaos to sustainable energy: carbon dioxide, methane and volcanic lakes.*

2. *About water magic and some word magicians’.*
   (http://www.investigacionyciencia.es/blogs/fisica-y-quinica/39/posts/acerca-de-la-magia-del-agua-y-de-algunos-magos-de-la-palabra-14098)

3. *Knowledge: teaching almost without master classes: (1) let us accept the challenge.*
   (http://www.investigacionyciencia.es/blogs/fisica-y-quinica/39/posts/acerca-de-la-magia-del-agua-y-de-algunos-magos-de-la-palabra-14098)

4. *Knowledge: teaching almost without master classes: (2) let us do it.*

5. *The ozone is recovering; the global warming is going ahead.*

6. *¿Bottled or tap water?*
7. *And the light is made: (1) the cosmic grandiosity.*

8. *And the light is made: (2) what is fire and other natural subtleties.*
II. IQTCUB ACTIVITIES
II.2 IQTCUB SEMINARS AND CONFERENCES

Dr. Stefan Bromley has continued organizing the seminars and conferences of IQTCUB during 2016. A total of ten seminars and/or conferences, which are listed below:

1. **Dr. Martin Goethe** (University of Barcelona) Spain.
   
   *Correcting free energy expressions for thermal motion.*
   
   February 4, 2016.

2. **Dr. Bern Ensing** (Van’t Hoff Institute for Molecular Sciences, University of Amsterdam) Netherlands.
   
   *First principle molecular dynamics simulations of electron transfer between aqueous solutes and in photoactive proteins.*
   
   February 16, 2016.

3. **Dr. Jordi Poater** (Organic Chemistry Department, University of Barcelona) Spain.
   
   *B-DNA structure and stability & silylenes stability and reactivity through DFT bonding analyses.*
   
   April 6, 2016.

4. **Prof. Aron Walsh** (University of Bath) UK.
   
   *Solar energy with a twist: dynamic disorder in hybrid perovskites.*
   
   April 22, 2016.

5. **Prof. Célia Fonseca** (Vrije Universiteit Amsterdam) Netherlands.
   
   *The role of aromaticity, hybridization, electrostatics and covalency in resonance-assisted hydrogen bonds.*
   
   April 25, 2016.
6. **Dante Alexander Morales** (Universidad Católica de Santa María de Arequipa) Perú.  
*Ciclótilos (Rubiaceae) frente a enfermedades neurodegenerativas.*  

7. **Prof. Sergi Garcia-Manyes** (Kings College London) UK.  
*Linking mechanochemistry to protein folding at the single bond level.*  
November 7, 2016.

8. **Dr. Jocelyne Vreede** (Van’t Hoff Institute for Molecular Sciences, University of Amsterdam) Netherlands.  
*Path sampling simulations of the mechanisms and rates of transitions between Watson-Crick and Hoogsteen base pairing in DNA.*  
November 11, 2016.

9. **Dr. Ivano Tavernelli** (Zürich Research Laboratory) Switzerland.  
*TDDFT-based nonadiabatic dynamics with relativistic effects.*  
November 17, 2016.

10. **Prof. Nadia Balucani** (University of Perugia) Italy.  
*Gas-phase chemistry in extraterrestrial environments.*  
December 15, 2016.
II.3 IQTCUB INVITED RESEARCHERS

During 2016, a total of fifteen researchers from all over the world have spent some time at the IQTCUB collaborating in different research projects.

1. **Dr. Angel Morales** (invited visitor).
   Charles University, Czech Republic.
   October 2016.

2. **Prof. Ichraf Oueslati** (COST project visitor).
   University of Paris, France.
   March 2016.

3. **Prof. Ivano Tavernelli** (invited visitor).
   IBM Zürich Research Laboratory, Switzerland.
   November 2016.

4. **Dr. Aaron Kelly** (invited visitor).
   Max Planck Institute for the Structure and Dynamics of Matter, Germany.
   November 2016.

   Università di Perugia, Itàlia.
   September 2016.

6. **Prof. Andrea Lombardi** (invited visitor).
   Università di Perugia, Itàlia.
   September 2016.

7. **Dante Alexander Morales** (invited visitor).
   Universidad Católica de Santa María de Arequipa, Perú.
   July-august 2016.
8. **Diego Ernesto Valencia** (invited visitor).
   Universidad Católica de Santa María de Arequipa, Perú.
   October 2016.

9. **Haruna Luz Barazorda** (invited visitor).
   Universidad Católica de Santa María de Arequipa, Perú.
   October 2016.

10. **Dr. Miroslava Nedyalkova** (Materials networking European project).
    University of Sofia, Bulgaria.
    November 2016.

11. **Prof. Hristiyan Alesandrov** (invited visitor).
    University of Sofia, Bulgaria.

12. **Prof. Jorge Pavez** (invited visitor).
    Universitat de Santiago de Chile, Chile.
    November 2016.

13. **Prof. Ingrid Ponce** (invited visitor).
    Universitat de Santiago de Chile, Chile.
    September 2016.

    Universitat de Santiago de Chile, Chile.
    September 2016.

15. **Prof. Nadia Balucani** (invited visitor).
    University of Perugia, Italy.
    December 2016.
III. SCIENTIFIC ACTIVITY OF IQTCUB MEMBERS

III.1 HIGHLIGHTS FROM MOST RELEVANT RESULTS

Here some of the most relevant results corresponding to every IQTCUB main research line are presented.

LINE 1. METHODS, ALGORITHMS AND COMPUTATIONAL TOOLS DEVELOPMENT

Magnetic coupling constants in three electrons three centers problems from effective hamiltonian theory and validation of broken symmetry-based approaches

D. Reta, I. de P.R. Moreira, F. Illas.

\[
\mathcal{H} = -J_{12}\mathbf{S}_1\mathbf{S}_2 - J_{23}\mathbf{S}_2\mathbf{S}_3 - J_{13}\mathbf{S}_1\mathbf{S}_3
\]

In the most general case of three electrons in three symmetry unrelated centres with \( S_1 = S_2 = S_3 = \frac{1}{2} \) localized magnetic moments; the low energy spectrum consists of one quartet (Q) and two doublet (D_1, D_2) pure spin states. The energy splitting between these spin states can be described with the well-known Heisenberg-Dirac-Van Vleck (HDVV) model spin Hamiltonian, and their corresponding energy expressions are expressed in terms of the three different two-body magnetic coupling constants \( J_{12}, J_{23}, \) and \( J_{13} \). However, the values of all three magnetic coupling constants cannot be extracted using the calculated energy of the three spin-adapted states since only two linearly independent energy differences between pure spin states exist. In the present work we investigate the 3 electrons in 3 centres problem by means of ab initio effective Hamiltonian theory using MRCI wave functions and validate the broken symmetry approach to extract the \( J_{12}, J_{23}, \) and \( J_{13} \) in the general non-symmetric case.
Universal steps in quantum dynamics with time-dependent potential-energy surfaces: Beyond the Born-Oppenheimer picture

G. Albareda, A. Abedi, I. Tavernelli, and A. Rubio.

It was recently shown [G. Albareda et al., Phys. Rev. Lett. 113, 083003 (2014)] that within the conditional decomposition approach to the coupled electron-nuclear dynamics, the electron-nuclear wave function can be exactly decomposed into an ensemble of nuclear wave packets effectively governed by nuclear conditional time-dependent potential-energy surfaces (C-TDPEs). Employing a one-dimensional model system, we show that for strong nonadiabatic couplings the nuclear C-TDPEs exhibit steps that bridge piecewise adiabatic Born-Oppenheimer potential-energy surfaces. The nature of these steps is identified as an effect of electron-nuclear correlation. Furthermore, a direct comparison with similar discontinuities recently reported in the context of the exact factorization framework allows us to draw conclusions about the universality of these discontinuities, viz., they are inherent to all nonadiabatic nuclear dynamics approaches based on (exact) time-dependent potential-energy surfaces.
Hückel’s rule of aromaticity categorizes aromatic closo boron hydride clusters

A direct connection is established between three-dimensional aromatic closo boron hydride clusters and planar aromatic [{\textit{n}}]\text{annulenes} for medium and large boron clusters. In particular, the results prove the existence of a link between the two-dimensional Hückel rule, as followed by aromatic [{\textit{n}}]\text{annulenes}, and Wade–Mingos’ rule of three-dimensional aromaticity, as applied to the aromatic \([B_{\textit{n}}H_{\textit{n}}]^{2-}\) closo boron hydride clusters. The closo boron hydride clusters can be categorized into different series, according to the \(n\) value of the Hückel \((4n+2)\pi\) rule. The distinct categories studied in this work correspond to \(n = 1, 2,\) and \(3\). Each category increases in geometrical difficulty but, more importantly; it is possible to associate each category with the number of pentagonal layers in the structure perpendicular to the main axis. Category 1 has one pentagonal layer, category 2 has two, and category 3 has three.
CO$_2$ is able to adsorb and activate in different transition metal carbides at low pressures and even high temperatures.

The capture and activation of the greenhouse gas carbon dioxide (CO$_2$) is a prerequisite to its catalytic reforming or breakdown. Here we report, by means of density functional theory calculations including dispersive forces, that transition metal carbides (TMC; TM = Ti, Zr, Hf, Nb, Ta, Mo) are able to uptake and activate CO$_2$ on their most-stable (001) surfaces with considerable adsorption strength. Estimations of adsorption and desorption rates predict a capture of CO$_2$ at ambient temperature and even low partial pressures, suggesting TMCs as potential materials for CO$_2$ abatement.
From widely accepted concepts in coordination chemistry to inverted ligand fields

We have designed a strategy for inverting the normal splitting of the metal d orbitals in
the presence of a ligand field and computationally constructed several examples with a
hypothetical but not unrealistic AlCH₃ ligand. Special attention is paid to the square-planar case,
exemplified by [Cu(CF₃)₄]⁺, in which Snyder had the foresight to see a case of an inverted field,
with the empty valence orbital being primarily ligand centered, the dₓ²₋ᵧ² orbital heavily occupied,
in what would normally be called a Cu(III) complex. For [Cu(CF₃)₄]⁻ we provide theoretical
evidence from electron distributions, geometry of the ligands, thermochemistry of molecule
formation, and the energetics of abstraction of a CF₃ ligand by a base, all consistent with
oxidation of the ligands in this molecule. Exploration of inverted ligand fields helps us see the
continuous, borderless transition from transition metal to main group bonding. We also give voice
to a friendly disagreement on oxidation states in these remarkable molecules.
First-principles study of structural, elastic and electronic properties of α-, β- and γ-graphyne

A. Ruiz-Puigdollers, P. Gamallo.

Carbon 96 (2016) 879.

This study presents different properties of 2D carbon allotropes: α-, β- and γ-graphynes based on Density Functional Theory calculations. Among the set of properties studied there are structural (e.g., cohesive energies, optimum lattice parameters, interatomic distances, pore sizes, planar packing densities and specific surface areas), mechanical (e.g., uniaxial along with homogeneous and heterogeneous biaxial strains, in-plane stiffness and Poisson’s ratio) and electronic properties (e.g., band structures, total and projected density of states, Dirac points or band gap location, Fermi velocity associated to the formers and the effective masses of the carriers associated to the latter). Basically, graphynes present lower values than graphene for cohesive energy, planar packing density, in-plane stiffness and Fermi velocities. Contrarily, graphynes posses a higher variety of pore sizes and a higher Poisson’s ratio. These facts make graphynes potential candidates for a wide variety of membrane separations and for applications that need softer materials but maintaining, in a lower extent, some of the electronic properties considered exceptional in graphene.
Formation of long, multicenter $\pi$-[TCNE]$_2^-$ dimers in solution: solvation and stability assessed through molecular dynamics simulations

Organic radical-ions dimerize in solution at low temperature forming long, multicenter bonds, despite the metastability of the isolated dimers. In this article, we presented the first computational study of these $\pi$-dimers in solution, with explicit consideration of solvent molecules and finite temperature effects. By means of force-field and \textit{ab initio} molecular dynamics and free energy simulations, the structure and stability of $\pi$-[TCNE]$_2^-$ dimers in dichloromethane was evaluated. While dimers dissociate at room temperature, they are stable at 175 K and their structure is similar to the one in the solid-state, with a cofacial arrangement of the radicals at an interplanar separation of ca. 3.0 Å. The $\pi$-[TCNE]$_2^-$ dimers form dissociated ion pairs with the NBu$_4^+$ counterions, and their first solvation shell comprises ca. 20 CH$_2$Cl$_2$ molecules. Among them, the 8 molecules distributed along the equatorial plane of the dimer play a key role in stabilizing the dimer via bridging C-H···N contacts. The calculated free energy of dimerization of TCNE$^-$ in solution at 175 K is 5.5 kcal mol$^{-1}$. These results provide the first quantitative model describing the pairing of radical-ions in solution, and demonstrate the key role of solvation forces on the dimerization process.
Under what conditions does (SiO)$_n$ nucleation occur? A bottom-up kinetic modelling evaluation

S. T. Bromley, J. C. Gómez Martín, J. M. C. Plane.

Although nano-sized and nano-segregated SiO has great technological potential and is of enormous astronomical interest, an accurate general description of SiO nucleation is lacking. We provide a state-of-the art evaluation of the range of pressure and temperature conditions for which formation of SiO will or will not proceed.
Localization versus delocalization in chiral single component conductors of gold bis(dithiolene) complexes

Neutral \([\text{Au(dm-dddt)}_2]\) complexes have an asymmetric structure and a mixed-valence nature with important consequences in its electrical conductivity in the solid state.

In this work we report the first examples of chiral single component conductors. Both (S,S) and (R,R) enantiomers of the 5,6-dimethyl-5,6-dihydro-1,4-dithiin-2,3-dithiolate (dm-dddt) ligand have been used to prepare neutral \([\text{M(dm-dddt)}_2]\) (M = Au, Ni) complexes. The most peculiar structural feature concerns a dissymmetry between the two dithiolene moieties for the Au compound, while the Ni counterpart is symmetric. Resistivity measurements show thermally activated behaviour for the open-shell gold complexes, with activation energies strongly influenced by hydrostatic pressure. A thorough theoretical study on Ni anion radical and Au neutral radical bis(dithiolene) complexes addressing the issue of symmetry versus asymmetry from an electronic coupling perspective between the two dithiolene ligands is presented. It results that neutral Au complexes with dithiolene ligands without extended delocalization are Class II mixed-valent compounds in the Robin and Day classification, presenting an inherent tendency toward asymmetric structures, which can be however modulated by the intermolecular organization in the solid state.
Counting electrons on supported nanoparticles

Electronic interactions between metal nanoparticles and supports are the key to advanced catalytic materials. By combining model experiments and theory, we answer a long-standing question related to such interactions: What is the charge on a supported catalyst particle? We quantify the charge transfer for the practically important case of ceria-supported platinum particles and rationalize the origin of its size dependence.
LINE 3. COMPUTATIONAL BIOCHEMISTRY AND SOFT MATTER

A trapped covalent intermediate of a glycoside hydrolase on the pathway to transglycosylation. Insights from experiments and QM/MM simulations

Enzymatic reaction catalyzed by transglycosylases (synthesis of a glycosidic bond).

The conversion of glycoside hydrolases into transglycosylases, i.e. from enzymes that hydrolyze carbohydrates to enzymes that synthesize them, represents a promising solution for the large scale synthesis of complex carbohydrates for biotechnological purposes. However, the lack of three-dimensional enzyme structures and the limited knowledge of the enzyme molecular mechanism at atomic level hampers the rational design of these enzymes. Here we present the first crystallographic structure of a reaction intermediate of a transglycosylase enzyme in complex with an intact carbohydrate. By means of computer simulations, we demonstrate that the enzyme is tuned to catalyze the formation of a new glycosidic bond (transglycosylation reaction) and propose that the variation of a given amino acid would improve significantly the synthetic activity of this family of enzymes.
Dealing with long-range interactions in the determination of polyelectrolyte ionization properties. Extension of the transfer matrix formalism to the full range of ionic strengths

The transfer matrix technique is a very powerful technique to solve Ising-type models of proton binding to polyelectrolytes, but its use is restricted to short range interactions. This work extends the technique to include long range interactions. The resulting titration curves that correspond to different binding models (homogeneous, heterogeneous, polyampholytes) are extremely accurate and indistinguishable in practice from those obtained by Monte Carlo simulations.
Functionalized surfaces with tailored wettability determine influenza A infectivity
ACS Applied Materials and Interfaces, 8 (2016) 15058.

The contact of a virus on a functionalized surface leads to a variety of interaction modes and eventually to the disruption of its lipidic envelope reducing the virus infectivity.

Surfaces contaminated with pathogenic microorganisms contribute to their transmission and spreading. The development of “active surfaces” that can reduce or eliminate this contamination necessitates a detailed understanding of the molecular mechanisms of interactions between the surfaces and the microorganisms. We studied the effects of surfaces functionalized with alkyl- and fluoro-silanes on the infectivity of Influenza A viruses using a number of experimental and computational methods including real-time fluorescence microscopy and molecular dynamics simulations. We show that surfaces that are simultaneously hydrophobic and oleophilic are more efficient in deactivating enveloped viruses. Our results suggest that the deactivation mechanism likely involves disruption of the viral membrane upon its contact with the alkyl chains. These combined features make these substrates highly promising for applications in hospitals and similar infrastructures where antiviral surfaces can be crucial.
Assessment of the sampling performance of multiple-copy dynamics versus a unique trajectory

Mostreig de l'espai configuracional amb múltiples trajectòries

In this work we did an extensive study to ascertain the differential performance of a long molecular dynamics trajectory versus several shorter ones starting from different points in the phase space and covering the same sampling time. For this purpose we selected the Bak_{16}BH3 peptide as model of study and carried out several samplings in explicit solvent. Samplings include a 8 µs trajectory; two 4 µs; four 2 µs; eight 1 µs; sixteen 0.5 µs and eighty 0.1 µs. Moreover, the 8 µs trajectory was further extended to 16 µs to have reference values of the diverse properties measured. As a conclusion our results suggest that a few short MD trajectories might provide a better sampling than one unique trajectory. However, caution should be exercised since short trajectories need to be long enough to overcome local barriers surrounding the starting point. An effective way to get insight into the minimum MD trajectory length requires monitoring the convergence of a structural feature, as for example the helical content of the peptide.
LINE 4. REACTIVITY AND REACTIONS DYNAMICS

Dehydrohalogenation and dehydration reactions of \( i-C_3H_7Br \) and \( i-C_3H_7OH \) by sodium ions studied by guided ion beams techniques and quantum chemical methods

Elimination reactions of gas phase \( i-C_3H_7Br \) and \( i-C_3H_7OH \) induced by collision with \( Na^+ \) in their electronic ground state were studied experimentally in a radiofrequency-guided ion beam (RF-GIB) apparatus and covering the 0.10 - 10.00 eV center of mass energy range. \( Na^+ + i-C_3H_7Br \) leads to form \([Na−i-C_3H_7Br]^+\), \([C_3H_6−Na]^+\), \([HBr−Na]^+\) and \( C_3H_7^+ \) while for \( Na^+ + i-C_3H_7OH \) only \([Na−i-C_3H_7OH]^+\), \([H_2O−Na]^+\) and \( C_3H_7^+ \) were found. For all products absolute excitation functions were measured and from them rate constants for the formation of \([C_3H_6−Na]^+\), \([HBr−Na]^+\) and \([H_2O−Na]^+\) at 303 K were obtained. *Ab initio* structure calculations at the MP2 level gave information on potential energy surfaces/PES where elimination and decomposition reactions evolve adiabatically, characterizing different minima and transition state connected along the IRC. PES topology features allow a qualitative interpretation of the experimental data and show the role of the sodium ion as a catalyst in elimination reactions.
Diffusion of $\text{H}_2$ and $\text{D}_2$ confined in single-walled carbon nanotubes: quantum dynamics and confinement effects

M. Mondelo-Martell, F. Huarte-Larrañaga.

In this publication we present quantum dynamics calculations of the diffusion constant of $\text{H}_2$ and $\text{D}_2$ along a single-walled carbon nanotube at temperatures between 50 and 150 K. We calculate the respective diffusion rates in the low pressure limit by adapting the flux correlation function formalism from the chemical dynamics field to the hopping model used in diffusion simulations. Two different Potential Energy Surfaces are employed to model the C-H interaction. Our results predict a usual kinetic isotope effect, with $\text{H}_2$ diffusing faster than $\text{D}_2$ in the higher temperature range, but a reverse trend at temperatures below 50-70 K. These findings are consistent with experimental observation in similar systems, and can be explained by the different effective size of both isotopes resulting from their different Zero Point Energy.
Electrostatic catalysis of a Diels-Alder reaction

The publication represents the first experimental demonstration of catalysis of a C-C formation reaction with non-redox reagents under the effect of an oriented external electrostatic field. The results open new challenges in the design of synthetic industrial chemical processes using an electric field as a catalyst for the reaction.
Impact of the water dimer on the atmospheric reactivity of carbonyl oxides
J.M. Anglada, A. Solé.

The reactions of twelve carbonyl oxides or Criegee intermediates with the water monomer and with the water dimer have been investigated employing high level theoretical methods. The study includes all possible carbonyl oxides arising from the isoprene ozonolysis and the methyl and dimethyl carbonyl oxides that originated from the reaction of ozone with several hydrocarbons. These reactions have great significance in the chemistry of the atmosphere because Criegee intermediates have recently been identified as important oxidants in the troposphere and as precursors of secondary organic aerosols. Moreover, water vapour is one of the most abundant trace gases in the atmosphere and the water dimer can trigger the atmospheric decomposition of Criegee intermediates. Our calculations show that the nature and position of the substituents in carbonyl oxides play a very important role in the reactivity of these species with both the water monomer and the water dimer. This fact results in differences in rate constants of up to six orders of magnitude depending on the carbonyl oxide. In this work we have defined an effective rate constant ($k_{eff}$) for the atmospheric reaction of carbonyl oxides with water vapour, which depends on the temperature and on the relative humidity as well. With this $k_{eff}$ we show that the water dimer, despite its low tropospheric concentration, enhances the atmospheric reactivity of Criegee intermediates, but its effect changes with the nature of carbonyl oxide, ranging between 59 and 295 times in the most favourable case (syn-methyl carbonyl oxide), and between 1.4 and 3 times only in the most unfavourable case.
Reaction dynamics inside superfluid helium nanodroplets: the formation of the Ne$_2$ molecule from Ne + Ne@($^4$He)$_N$

A. Vilà, M. González.

Snapshots showing the time evolution of the helium density along the Ne-Ne axis (z axis) for the Ne + Ne@($^4$He)$_{500}$ reaction at the initial average velocity of Ne of 300 m/s ($J=0$).

The hybrid TDDFT approach proposed by us (J. Chem. Theory Comput., 2015, 11, 899) was extended to reactive processes involving a superfluid helium nanodroplet [A + B@$^4$He$_{Nv}$ AB@$^4$He$_N$ + (N-N')$^4$He]; T=0.37 K. This is the first theoretical attempt to study the reaction dynamics of bimolecular type processes involving $^4$He$_N$ and the Ne + Ne@$^4$He$_N$ reaction was considered as the first application example ($J=0$). We examined the influence of the nanodroplet size (N=200-1000) and initial velocity of the outer Ne atom ($<v_o>$=120-1000 m/s). The inner Ne atom only produces a greater reduction of the velocity of the outer Ne atom in comparison to what happens in the case of the capture of a Ne atom by a pure nanodroplet. The formation of the molecule is a complex phenomenon related with the nature of the helium density waves produced and their reflection from the nanodroplet surface. This quantum treatment can also be applied to the study of the photodissociation of an arbitrary diatomic molecule in $^4$He$_N$.

Comparing the catalytic activity of the water gas shift reaction on Cu(321) and Cu(111) surfaces: step sites do not always enhance the overall reactivity

J. Cat., 342 (2016) 75.

A Density Functional Theory based first-principles kinetic Monte Carlo (kMC) study of the water gas shift reaction on the stepped Cu(321) surface is presented. We use the recently developed graph-theoretical kMC approach coupled with cluster expansion Hamiltonians to model the coverage-dependent energy barriers for the different surface processes, including adsorption/desorption, diffusion and other elementary chemical reactions, totalling 36 elementary steps, which allow two possible competitive mechanisms: surface redox and associative COOH. All results are compared to a previous kMC study on Cu(111). Both mechanisms are observed for Cu(321) surface with different extension, whereas the associative COOH one was the dominant for Cu(111). The present study shows that, in spite of encompassing lower activation energy barriers, stepped surfaces do not necessarily have an overall larger catalytic activity. Coverage effects and the significant contribution of some of the reverse processes are behind this behaviour.

   December 2016.

2. Computational Study of the Mechanisms that Stabilize Organic Molecule-Based Magnets.
   **Maria Pilar Lafuente Hernández**
   Theoretical and Computational Chemistry PhD programme.
   Faculty of Chemistry, University of Barcelona.
   December 2016.

3. Understanding and predicting magnetic coupling in complex systems: from inorganic complexes to organic polyradicals.
   **Daniel Reta Mañeru**
   Supervisor/s: I. de P. R. Moreira, F. Illas.
   Theoretical and Computational Chemistry PhD programme.
   Faculty of Chemistry, University of Barcelona.
   January 2016.

MASTERS THESSES 2016

1. Catalytic reaction of β-galactocerebrosidase investigated by QM/MM ab initio metadynamics
   **Alba Nin Hill**
   Supervisor/s: C. Rovira.
   European Master in Theoretical Chemistry and Computational Modelling.
   Faculty of Chemistry, University of Barcelona.
   July 2016.

   **Alejandro Martín Rodríguez**
   Supervisor/s: E. Ruiz.
   European Master in Theoretical Chemistry and Computational Modelling.
   Faculty of Chemistry, University of Barcelona.
   July 2016.
3. **Toward a drug design that selective activate the pro-apoptotic bax protein using multiple representative structures.**  
Anna Cebrián Prats  
Supervisor/s: J. Rubio.  
European Master in Theoretical Chemistry and Computational Modelling.  
Faculty of Chemistry, University of Barcelona.  
July 2016.

4. **Estudi del rendiment i aplicabilitat del Force Field FFSiOH per a clústers de silica amb diferents graus d’hidroxilació.**  
Antoni Macià Escatllar  
Supervisor/s: S. Bromley.  
European Master in Theoretical Chemistry and Computational Modelling.  
Faculty of Chemistry, University of Barcelona.  
July 2016.

5. **Study of the spin interactions and magnetism in Cu(hfac)$_2$L$^R$ ($L^R$=butyl-pirazolyl nitronyl nitroxide) “breathing crystal”.**  
Cristina Roncero Barrero  
Supervisor/s: M. Deumal.  
Master in Atomistic and Multiscale Computational Modelling in Physics, Chemistry and Biochemistry.  
Faculty of Chemistry, University of Barcelona.  
July 2016.

6. **Conditional Wave Function approach to ab-initio molecular and electron dynamics.**  
Efrem Bernuz Fitó  
European Master in Theoretical Chemistry and Computational Modelling.  
Faculty of Chemistry, University of Barcelona.  
July 2016.

7. **Estudio computacional del efecto del disolvente en la transición de espín de los sistemas [Fe(E-dpsp)$_2$](BF$_4$)$_2$·acetona y [Fe(E-dpsp)$_2$](BF$_4$)$_2$·PC**  
Fernando Jiménez Grávalos  
Supervisor/s: J. Ribas.  
European Master in Theoretical Chemistry and Computational Modelling.  
Faculty of Chemistry, University of Barcelona.  
July 2016.

8. **Modellització de l’intermedi de reacció en quitinases.**  
Joan Coines López-Nieto  
Supervisor/s: C. Rovira, X. Biarnés.  
Master in Bioengineering.  
Institut Químic de Sarrià, Ramon Llull University.  
July 2016.
   **Mireia Via Nadal**
   Supervisor/s: S. Madurga, F. Mas.
   European Master in Theoretical Chemistry and Computational Modelling.
   Faculty of Chemistry, University of Barcelona.
   July 2016.

10. The effect of macromolecular crowding on oligomeric enzyme kinetics: Negative cooperativity on GDH.
    **Núria Vilaplana Lopera**
    Supervisor/s: F. Mas, C. Balcells.
    Master in Molecular Biotechnology.
    Faculty of Pharmacy, University of Barcelona.
    July 2016.

    **Pablo M. Blanco Andrés**
    Supervisor/s: S. Madurga.
    Master in Atomistic and Multiscale Computational Modelling in Physics, Chemistry and Biochemistry.
    Faculty of Chemistry, University of Barcelona.
    July 2016.
III. SCIENTIFIC ACTIVITY OF IQTCUB MEMBERS
SCIENTIFIC ACTIVITY OF IQTCUB MEMBERS

SCIENTIFIC CONFERENCES AND MEETINGS 2016

251st ACS National Meeting & Exposition - Computers in Chemistry
San Diego (USA), 13 – 17 march 2016

Aromaticity criteria based on electron delocalization measures (oral communication)
J. Poater

Role of hydrogen bonding, pi-pi stacking interactions, twist angle, and solvation on B-DNA (oral communication)
J. Poater

Close connection between pi aromaticity of hydrocarbons and three-dimensional aromaticity of closo boron hydrides (oral communication)
J. Poater

252nd ACS National Meeting & Exposition – Chemistry of the people, by the people, for the people
Philadelphia (USA), 21 – 25 August 2016

How carbohydrate active enzymes work. Insights from QM/MM simulations oral communication
C. Rovira

2nd Advances in Crystal Engineering
Barcelona (Spain), 15 January 2016

J. J Novoa (meeting organizer)

Aussois (France), 11 – 16 September 2016

Gas surface processes on re-entry heat shields (invited talk)
P. Gamallo

67th Annual Meeting of the International Society of Electrochemistry
The Hague (Netherlands), 21 – 26 August 2016

Studying chemical reactions at the nanoscale (oral communication)
A. C. Aragonès, N. Darwish, S. Ciampi, M. Coote, I. Díez-Pérez

Studying charge transport in Single-Protein wires (oral communication)
M. Pozuelo-Ruiz, J. M. Artés, F. Sanz, P. Gorostiza, I. Díez-Pérez
Annual User Meeting of the Spanish Supercomputing Network (Red Española de Supercomputación)
León (Spain), 20 September 2016

Computational design of advanced nanoalloy materials (invited talk)
K. M. Neyman, G. Kovács, S. M. Kozlov

CECAM Workshop: Different Routes to Quantum Molecular Dynamics
Lausanne (Switzerland), 6 – 10 June 2016

G. Albareda (meeting organizer)

Towards ab-initio molecular dynamics without Born-Oppenheimer potential-energy surfaces (oral communication)
G. Albareda, A. Abedi, I. Tavernelli, A. Rubio

CECAM Workshop: Towards a Common Format for Computational Materials Science Data
Lausanne (Switzerland), 25 January – 5 February 2016

Additional properties a quantum chemist will like to find in NOMAD (oral communication)
F. Illas

CECAM Workshop: Structure prediction of nanoclusters from global optimization techniques: computational strategies and connection to experiments
Pau (France), 5 – 8 July 2016

Global optimisation of silicon oxide clusters (oral communication)
S. T. Bromley

IV Congreso Nacional de Nanotecnología 2016
Olmué (Chile), 5 – 7 September 2016

Probing new concepts in single-molecule wires: diode, electromechanics, transistor, magnetoresistance, photoswitching and chemical reactivity (oral communication)
I. Díez-Pérez

EMRS 2016 Spring Meeting
Lille (France), 2 – 6 May 2016

Design of open-shell 2D covalent materials with controllable properties (oral communication)
S. T. Bromley, I. Alcón

4th Energy Materials Workshop of the Thomas Young Centre and TOUCAN International conference Shaping Nanocatalysts
London (UK), 14 – 16 December 2016

Sophisticated computational design of bimetallic nanocrystallites (invited talk)
K. M. Neyman, G. Kovács, S. M. Kozlov

K. M. Neyman (chairman)
III. SCIENTIFIC ACTIVITY OF IQTCUB MEMBERS

ESPA2016: 10th Congress on Electronic Structure: Principles and Applications
Castelló de la Plana (Spain), 28 June – 1 July 2016

On the mechanism of bistability in molecule-based magnets: the prototype PDTA case (poster)
T. Francese, M. Deumal, J. Ribas-Ariño, J.J. Novoa

How carbohydrate-active enzymes work (oral communication)
C. Rovira

6th EuCheMS Chemistry Congress
Sevilla (Spain), 11-15 September 2016

Selective capture and separation of industrial post-combustion gases using zeolites: a theoretical approach (poster)

Effect of impurities in CO₂ capture with Mg-MOF-74 and their role in swing adsorption processes (poster)
X. Giménez, F. Keshavarz, D. Bahamón, P. Gamallo, R. Sayós

Kinetic Monte Carlo study of the water gas shift reaction on Cu (321) surface based on density functional theory data (oral keynote)
R. Sayós, H. Prats, P. Gamallo, F. Illas

Dihydrogen interactions in alkanes (oral communication)
J. Echeverría

Aromaticity: A complex concept which may be made understood to the public (oral communication)
M. Duran, S. Simon, M. Solà, J. Poater

1st European Conference of Molecular Spintronics
Bologna (Italy), 15-18 November 2016

Magnetoresistance in single-molecule devices based on magnetic mononuclear transition metal complexes (oral communication)
E. Ruiz

European Conference on Laboratory Astrophysics – Gas on the Rocks - ECLA 2016
Madrid (Spain), 21 – 25 November 2016

Silicate dust: a bottom-up computational approach (oral communication)
S. T. Bromley
III. SCIENTIFIC ACTIVITY OF IQTCUB MEMBERS

21st European Conference on the Dynamics of Molecular Systems - MOLEC 2016
Toledo (Spain), 11 – 16 september 2016

Environmentally relevant ion-molecule processes: Non-adiabatic collisions in ground state N2O and CO molecules with Na+ and Li+ in the 0.10-5.00 keV energy range (poster)
J. de Andrés, J. M. Lucas, M. Albertí, J. M. Bofill, A. Aguilar

Radio Frequency Ion Beams (RF-GIB) study of ion-molecule reactions having environmental, astrochemical and prebiotical relevance at the few eV energy range (poster)
J. M. Lucas, J. de Andrés, M. Albertí, J. M. Bofill, A. Aguilar

European Graphene Forum - EGF 2016
Paris (France), 1-3 june 2016

Graphynes: from competitors to graphene to atomic sieves and scatters (oral communication)
F. Viñes, M. Manadé, S. Kim, P. Gamallo, J.Y. Lee, F. Illas

Excited State Simulations: Bridging Scales workshop
Marseille (France), 7 – 10 november 2016

Computational modeling of organometallic iridium(III) triplet emitters (poster)
C. Climent, D. Casanova, P. Alemany

Fachbeirat (scientific advisory board Meeting) of the Max Planck Institute for the Structure and Dynamics of Matter
Hamburg (Germany), 9 – 11 march 2016

Towards ab-initio molecular dynamics without Born-Oppenheimer potential-energy surfaces (oral communication)
G. Albareda, A. Abedi, I. Tavernelli, A. Rubio

Fotofuel – Summer School
Almeria (Spain), 25 – 27 october 2016

Theoretical modelling of light harvesting materials (oral communication)
F. Viñes

Festival of Genomics
London (UK), 19 – 21 january 2016

Chemical basis for the recognition of trimethyllysine by epigenetic reader proteins (poster)
J. Poater, F. M. Bickelhaupt, J. Mecinovic
funCOS
Erlangen (Germany), 29 July 2016

Theoretical modelling of catalytic materials and their reactivity: as simple as possible, but not simpler (invited talk)
K. M. Neyman

115th General Assembly of the German Bunsen Society for Physical Chemistry, Bunsentagung 2016
Rostock (Germany), 5-7 May 2016

Low platinum group metal fuel cell catalysts: from surface science to in-situ spectroelectrochemistry (oral communication)

General Assembly meeting of the FP7 project ChipCAT Design of Thin-Film Nanocatalysts for On-Chip Fuel Cell Technology
Prague (Czech Republic), 9-10 May 2016

Progress report on the work package 2 “Computational modelling” (oral communication)
K. M. Neyman

General Meeting of the COST Action CM1104 Reducible oxide chemistry, structure and functions
Osnabrück (Germany), 6-8 April 2016

Modeling interactions of transition metals with ceria nanoparticles: applications for fuel cell technologies (poster)
A. Figueroba, K. M. Neyman

Modelling of ceria-based nanostructured inspired by the action CM1104 (oral communication)
K. M. Neyman, A. Figueroba, S. M. Kozlov

Metal-oxide interactions in Pt/CeO₂ catalysts and related phenomena (oral communication)

12th German Conference on Chemoinformatics
Fulda (Germany), 6-8 November 2016

The “NOMAD (novel materials discovery) center of excellence”: challenges and solutions to build a code-independent data base for computational materials science and its implication in computational chemistry (oral communication)
F. Illas
III. SCIENTIFIC ACTIVITY OF IQTCUB MEMBERS

Girona Seminar. Predictive catalysis: Transition-metal reactivity by design
Girona (Spain), 17 – 20 april 2016

   Electronic structure and reactivity of donor-stabilized bis(amidinato/guanidinato) silylenes (poster)
   J. Poater, C. F. Guerra, F. M. Bickelhaupt, R. Tacke

High Dimensional Quantum Dynamics – challenges and opportunities
Rostok (Germany), 31 august – 3 september 2016

   Diabatization of the H₂@SWNT system within the MCTDH approach: circumventing potential energy matrix calculations (oral communication)
   M. Mondelo-Martell, F. Huarte-Larrañaga

HPC Materials Chemistry Consortium
Cardiff (UK), 16 november 2016

   From building blocks to bulk: design and understanding of nanostructured materials from the bottom-up (oral communication)
   S. T. Bromley

Interfaces Against Pollution - IAP2016
Lleida (Spain), 4 – 7 september 2016

   Functionalized surfaces with tailored wettability determine influenza A infectivity (poster)
   I. Mannelli, R. Reigada

   One century of the Langmuir adsorption isotherm (poster)
   F. Mas, C. Rey-Castro

   Dealing with electrostatic interactions in the determination of ion binding properties of polyelectrolytes. Extension of the transfer matrix formalism to the full range of ionic strengths (poster)
   J.L. Garcés, S. Madurga, C. Rey-Castro, F. Mas

   F. Mas (organizing committee)

42nd International Conference on Coordination Chemistry
Brest (France), 3 – 8 july 2016

   Transport properties of single-molecule devices showing room temperature magnetoresistance (invited talk)
   E. Ruiz

   Computational modeling of the ligand tuning effect over the transition temperature in spin-crossover systems (oral communication)
   J. Cirera, E. Ruiz

   Disentangling a long lasting issue: which is the magnetic dimensionality of the Cu₂(1,4-diazacycloheptane)₂Cl₄ crystal? (oral communication)
   J. Jornet-Somoza, F. Cosi, M. Fumanal, M. Deumal
III. Scientific Activity of IQTCUB Members

X International Conference on Mechanisms of Catalytic Reactions, School-Symposium on Quantum-mechanical modelling of catalytic processes
Svetlogorsk (Russia), 2 – 6 October 2016

Innovative computational design of advanced nanoalloy materials for catalysis and beyond (invited talk)
K. M. Neyman

K. M. Neyman (chairman)

8th International Conference on Molecular Electronics - ElecMol 2016
Paris (France), 22 – 26 August 2016

New fundamental effects in single-molecule circuitry (oral communication)
A. C. Aragonèes, N. Darwish, F. Sanz, I. Díez-Pérez

15th International Conference on Molecule-Based Magnets - ICMM2016
Sendai (Japan), 4 – 8 September 2016

On the mechanism of bistability in three dithiazolyl molecule-based magnetic crystals (poster)
T. Francese, M. Deumal, J. Ribas-Ariño, J. J. Novoa

Magnetoresistance at room temperature in single-molecule porphyrin-based devices (oral communication)
E. Ruiz

16th International Conference on Theoretical Aspects of Catalysis - ICTAC-16
Zakopane (Poland), 19 – 23 June 2016

Transition metal carbides based catalysts for CO₂ conversion: computational modeling and experiments (invited talk)
S. Posada-Pérez, F. Viñes, J. A. Rodríguez, P. Liu, D. J. Stacchiola, P. J. Ramírez, R. A. Gutiérrez, F. Illas

Computationally designed nanoparticle as advanced models of bimetallic catalysts (invited talk)
K. M. Neyman

K. M. Neyman (chairman)

16th International Congress on Catalysis – ICC 2016
Beijing (China), 3 – 8 July 2016

Metal-carbide synergism in heterogeneous catalysis: an overview (oral communication)
F. Viñes, P. Liu, J. A. Rodríguez, F. Illas

Efficient in-silico design of advanced nanoalloy materials for catalysis and related applications (invited talk)
K. M. Neyman, G. Kovács, S. M. Kozlov
The variational nature of some reaction path models (oral communication)
J. M. Bofill, W. Quapp

The use of Newton trajectories in mechanochemistry and catalysis (oral communication)
W. Quapp, J. M. Bofill

Computational engineering of bimetallic nanocrystals with tailor-made atomic ordering (oral communication)
S. M. Kozlov, K. M. Neyman, G. Kovács, Z. Cao, L. Falivene, L. Cavallo

Materials for single-atom catalysis based on nanostructured ceria: Density-functional modelling (invited talk)
K. M. Neyman

K. M. Neyman (chairman)

Single molecule motors working on surface (invited talk)
J. Echeverría

Adsorption and separation of post-combustion gases with Mg-MOF-74 (poster)
F. Keshavarz, X. Giménez, D. Bahamón, P. Gamallo, R. Sayós

Nomad, the novel materials discovery laboratory (invited talk)
R. Valero, A. H. Larsen, S. T. Bromley, F. Illas

Using open-shell molecules to design 2D covalent networks with controllable properties (poster)
I. Alcón, S. T. Bromley, F. Illas

Selective capture and separation of industrial post-combustion gases with FAU-type zeolites: a computational study (poster)

Stability of ZnO nanoparticles as function of shape and size (poster)
O. Lamiel-Garcia, F. Viñes, F. Illas, S. T. Bromley
Performance of density functional theory based methods in predicting core level binding energies and the physical meaning of Khon-Sham energies (poster)
N. Pueyo-Bellafont, P. S. Bagus, F. Illas

Highly active Cu/β-Mo2C and Cu/δ-MoC catalysts for the conversion of CO2: The metal/C ratio as a key factor defining activity, selectivity, and stability (poster)
S. Posada-Pérez, P. J. Ramirez, J. Evans, F. Viñes, P. Liu, F. Illas, J. A. Rodriguez

Graphene interaction with Ni(111) described by modern dispersive forces (poster)
H. Muñoz-Galán, F. Viñes, J. Gebhardt, A. Görling, F. Illas

A conditional wave function approach to reactive scattering (poster)
E. Bernuz, J. M. Bofill, F. Illas, G. Albareda

Extension of the transfer matrix methods to include long-range interactions (poster)
J. L. Garcés, P. M. Blanco, S. Madurga, F. Mas

Brownian dynamics simulations of enzymatic reaction-diffusion processes in crowded intracellular environments (poster)
M. Via, P. M. Blanco, S. Madurga, J. L. Garcés, F. Mas

Macromolecular crowding effect on the cooperativity of enzymatic reactions (poster)
N. Vilaplana, C. Balcells, S. Madurga, J. L. Garcés, M. Cascante, F. Mas

Jornada catalana de supercomputació – recerca i supercomputació: compartint memòries i avançant el futur
Barcelona (Spain), 25 may 2016

Simulacions computacionals per a entendre com funcionen els enzims (oral communication)
C. Rovira

Master Química XII
Barcelona (Spain), 18 may 2016

Simulació per Dinàmica Browniana de processos de difusió de proteïnes en medis intracel·lulars (poster)
P. M. Blanco, M. Via, S. Madurga, F. Mas

Efecte de l’aglomeració macromolecular sobre la cooperativitat de l’enzim glutamat-deshidrogenasa (poster)
N. Vilaplana, C. Balcells, S. Madurga, J. L. Garcés, M. Cascante, F. Mas

NOMAD PI & SAC Meeting
Barcelona (Spain), 3 – 5 october 2016

CO2 Adsorption and Activation: Identifying Materials and Descriptors (oral communication)
C. Kunkel
III. SCIENTIFIC ACTIVITY OF IQTCUB MEMBERS

Not Strictly Inorganic Chemistry - NOSIC-7
Prullans (Spain), 1 – 3 June 2016

Kurt Vonnegut’s cat’s cradle: a tale on science, religion and human stupidity (oral communication)
P. Alemany

Olivier Kahn Discussions
Bordeaux (France), 26 – 28 May 2016

Molecular Mechanisms of Spin Crossover in the \( \{ \text{Fe(pz)}[\text{Pt(CN)}_4] \} \) Metal-Organic Framework upon Water Adsorption (oral communication and poster)
J. Cirera, F. Paesani

Partnership for advanced computing in Europe - PRACEdays16
Prague (Czech Republic), 10 – 12 May 2016

Computer simulation to understand how enzymes work (oral communication)
C. Rovira

6th Phase Transition and Dynamical properties of Spin Transition Materials
Gandia (Spain), 27 – 30 November 2016

Spin crossover systems: from quantum transport to microporous materials (invited talk)
E. Ruiz

Quantum Dynamics: from Algorithms to Applications
Greifswald (Germany), 5 – 8 September 2016

Diabatization of the \( \text{H}_2@\text{SWNT} \) system within the MCTDH approach: time scale separation of confined and free coordinates (oral communication)
M. Mondelo-Martell, F. Huarte-Larrañaga

Reducible oxide chemistry, structure and functions COST Action CM1104, Final General meeting
Osnabrück (Germany), 6 – 8 April 2016

Towards a first principles description of realistic models of \( \text{TiO}_2 \) nanoparticles (oral communication)

XXXII Reunió de la xarxa de Referència en Química Teòrica i Computacional de Catalunya - XrQTC
Barcelona (Spain), 4 – 5 July 2016

On the mechanism of bistability in molecule-based magnets (oral communication)
T. Francese, M. Deumal, J. Ribas-Ariño, J. J. Novoa
Computational study of the Si/Al ratio effect in FAU-type zeolites for CO$_2$ post-combustion capture (oral communication)

Density functional theory description of the electronic structure of realistic models of TiO$_2$ nanoparticles (oral communication)

Mo carbides for the conversion of CO$_2$: the metal/C ratio as a key factor (oral communication)
S. Posada-Pérez, P. J. Ramírez, J. Evans, F. Viñes, P. Liu, F. Illas, J. A. Rodriguez

Using open-shell molecules to design 2D covalent networks with controllable properties (oral communication)
I. Alcón, F. Illas, S.T. Bromley

Conditional Born-Oppenheimer dynamics (oral communication)
E. Bernuz, J. M. Bofill, F. Illas, G. Albareda

Towards ab-initio molecular dynamics without Born-Oppenheimer potential-energy surfaces (oral communication)
G. Albareda

Molecular sieving of H$_2$ and D$_2$ in a carbon nanotube: kinetic vs thermodynamic effects (oral communication)
M. Mondelo-Martell, F. Huarte-Larrañaga

Prebiotic Reactions base on Titan’s Atmosphere Chemistry (oral communication)
E. López, D. Ascenzi, P. Tosi, J. M. Bofill, A. Aguilar

Effect of mixed crowded media on the diffusion processes of proteins in intracellular media by Brownian dynamics simulations (oral communication)
P. M. Blanco, M. Via, S. Madurga, J. L. Garcés, F. Mas

III Reunión de Jóvenes Investigadores en Coloides e Interfases - JICI
Madrid (Spain), 13 – 14 October 2016

Risk assessment of manufactured nanomaterials. Where classical theories of Colloids and Interfaces meet emerging environmental challenges in the 21st Century (invited talk)
C. Rey-Castro, C. David, F. Mas, J. Galceran, J. Puy

Brownian dynamics of the macromolecular crowding effect in reaction-diffusion process in cellular media (oral communication)
P. M. Blanco, M. Via, S. Madurga, J. L. Garcés, E. Vilaseca, F. Mas
Seminar at Instituto de Física de la Materia Condensada (IFIMAC) 2016
Madrid (Spain), 2 June 2016

Exploring external stimuli to modulate the conductance in single-molecule wires at room conditions (invited talk)
I. Diez-Pérez

Seminar at Jagiellonian University
Krakow (Poland), 17 June 2016

Theoretical modelling of catalytic materials: as simple as possible, but not simpler (invited talk)
K. M. Neyman

Seminar at Université de Bretagne Occidentale (UMR CNRS 6521)
Brest (France), 1 July 2016

Computational Modeling of the ligand tuning effect over the transition temperature in Spin-Crossover systems (invited talk)
J. Cirera

XXV Sitges Conference on Statistical Physics. Nonequilibrium Phenomena in Confined Systems
Barcelona (Spain), 6 – 10 June 2016

Effect of mixed crowded media on the diffusion processes of proteins in intracellular media by Brownian dynamics simulations (invited talk)
P. M. Blanco, M. Via, S. Madurga, J. L. Garcés, F. Mas

Extension of the transfer matrix methods to include long-range interactions in polyelectrolytes (poster)
J. L. Garcés, P. M. Blanco, S. Madurga, F. Mas

Macromolecular crowding effect on the cooperativity of enzymatic reactions (poster)
N. Vilaplana, C. Balcells, S. Madurga, J. L. Garcés, M. Cascante, F. Mas

VI Simpósio de Estrutura Eletrônica e Dinâmica Molecular - SeedMol 2016
Alto Paraiso de Goiás (Brasil), 19 – 23 September 2016

Metal-carbide synergism in heterogeneous catalysis: an overview (invited talk)
F. Viñes, P. Liu, J. A. Rodriguez, F. Illas

XIII Simposio de Investigadores Jóvenes de la RSEQ
Logroño (Spain), 8 – 11 November 2016

Simulaciones computacionales en procesos de elevado interés industrial (invited talk)
III. SCIENTIFIC ACTIVITY OF IQTCUB MEMBERS

III Simposio de Jóvenes Investigadores de la SEQT
Barcelona (Spain), 17 June 2016

*Synthesis and biological activity of new resveratrol derivatives (poster)*
L. Grau, R. Soucek, J. Rubio, M. D. Pujol

State of the art in bistable magnetic molecules - post-ICMM Symposium
Fukuoka (Japan), 10 September 2016

*First-principles theoretical studies on the mechanism of bistability in molecule-based magnets: the PDTA case (oral communication)*
T. Francese, M. Deumal, J. Ribas-Ariño, J. J. Novoa

1st Symposium of the Research Unit NAGOCAT – Nanoporous Gold Catalysts - FOR2213
Delmenhorst (Germany), 8 – 9 September 2016

*Progress in modelling of catalytic materials: engineering of bimetallic nanocrystallites (invited talk)*
K. M. Neyman

Symposium on Size-Selected Clusters 2016
Davos (Switzerland), 28 February – 4 March 2016

*Size dependent greenness: bottom-up versus top-down approaches to understanding titania clusters (oral communication)*
S. T. Bromley

52nd Symposium on Theoretical Chemistry - STC 2016
Bochum (Germany), 26 – 29 September 2016

*The key role of second order phase transitions in dithiazolyl-based switchable magnetic materials (poster)*
S. Vela, M. Deumal, J. J. Novoa, J. Ribas-Ariño

Telluride Science Research Center 2016 Workshop
Telluride (USA), 26 June – 2 July 2016

*Spin dependent transport in single-molecule wires at room temperature (invited talk)*

17th Tetrahedron Symposium - Challenges in Biological, Bioorganic & Medicinal Chemistry
Sitges (Spain), 28 June – 1 July 2016

*Synthesis of 2,6-bis(benzyliden)piperidin-4-one with potential antitumor activity (poster)*
L. Navarro, J. Rubio, M. D. Pujol

*Design and synthesis of arylamides as potential G6PDH inhibitors (poster)*
L. Acedo, J. Rubio, M. D. Pujol
III. SCIENTIFIC ACTIVITY OF IQTCUB MEMBERS

The Osaka City University International Conference on Molecular Spins and Quantum Technology - OCUIC-2016
Osaka (Japan), 31 August – 4 September 2016

The mechanism of bistability in three dithiazolyl molecule-based magnetic crystals (invited talk)

On the mechanism of bistability in prototype PDTA molecule-based magnets (oral communication)
T. Francese, M. Deumal, J. Ribas-Ariño, J. J. Novoa

Theoretical Challenges: Simulating Materials out of Equilibrium
Hamburg (Germany), 1 – 3 June 2016

Towards ab-initio molecular dynamics without Born-Oppenheimer potential-energy surfaces (invited talk)
G. Albareda, A. Abedi, I. Tavernelli, A. Rubio

Theoretical Modelling of Nanoparticulate Materials: Theory Catching up with Experiment
Barcelona (Spain), 30 September 2016

Graphene interaction with Ni(111) described by modern dispersive forces
H. Muñoz-Galán, F. Viñes, J. Gebhardt, A. Görling, F. Illas

Bcc transition metal surfaces: trends in work functions and surface energies
L. Vega, F. Viñes

Mo carbides for the conversion of CO₂: the metal/C ratio as a key factor
S. Posada-Pérez, P. J. Ramírez, J. Evans, F. Viñes, P. Liu, F. Illas, J. A. Rodriguez

A. Figueroba, G. Kovács (meeting organizers)

K. M. Neyman (chairman)

9ª Trobada de Joves Investigadors dels Països Catalans
Perpignan (France), 3 – 5 February 2016

Selective capture and separation of industrial post-combustion gases using different zeolites. A theoretical approach (oral communication)

Difusió en medis intracel·lulars. Simulació per dinàmica browniana (oral communication)
M. Via, P. M. Blanco, S. Madurga, F. Mas

R. Sayós (meeting organizing committee)
III. SCIENTIFIC ACTIVITY OF IQTCUB MEMBERS

4th TYC Energy Materials Workshop: Shaping Nanocatalysts
London (UK), 14 – 16 December 2016

Modeling realistic TiO$_2$ nanoparticles for improved photocatalytic activity from density functional theory based calculations (invited talk)
F. Illas

Sophisticated computational design of bimetallic nanoprisms (invited talk)
K. M. Neyman, G. Kovács, S. M. Kozlov

K. M. Neyman (chairman)

Workshop on Advanced Functional Materials
Pravets (Bulgaria), 14 – 16 October 2016

Computational modelling of inorganic nanomaterials for catalysis and energy technologies (invited talk)
K. M. Neyman
III. SCIENTIFIC ACTIVITY OF IQTCUB MEMBERS
## Research Stays in Recognized Centers

III. SCIENTIFIC ACTIVITY OF IQTCUB MEMBERS
PARTICIPATION IN COMPETITIVE FUNDED RESEARCH PROJECTS

Xarxa de Referència d’R+D+I en Química Teòrica i Computacional (XRQTC)  
Francesc Illas Riera, Universitat de Barcelona  
2014  
Departament d’Innovació, Universitats i Empresa. Generalitat de Catalunya

Grup de Dinàmica de Reaccions Químiques  
Antonio Aguilar Navarro, Universitat de Barcelona  
2014SGR0025, 2014-2016  
Agència de Gestió d’Ajuts Universitaris i de Recerca (AGAUR)

Grup de Recerca Reconegut i Finançat per la Generalitat de Catalunya  
Francesc Illas Riera  
Universitat de Barcelona  
2014SGR97, 2014-2016  
Agència de Gestió d’Ajuts Universitaris i de Recerca (AGAUR), Generalitat de Catalunya

Química Orgànica Experimental, Teòrica i Computacional  
Josep Maria Bofill Vilà, Universitat de Barcelona  
2014SGR139, 2014-2016  
Agència de Gestió d’Ajuts Universitaris i de Recerca (AGAUR)

Grup d’Estructura Electrònica.  
Santiago Alvarez Reverter, Universitat de Barcelona  
2014SGR662, 2014-2016  
Agència de Gestió d’Ajuts Universitaris i de Recerca (AGAUR)

Grup d’Estructura i funció en macromolècules  
Carme Rovira Virgili, Universitat de Barcelona  
2014SGR987, 2014-2016  
Agència de Gestió d’Ajuts Universitaris i de Recerca (AGAUR)

Grup de Bioquímica Integrativa  
Marta Cascante Serratos, Universitat de Barcelona  
2014SGR1017, 2014-2016  
Agència de Gestió d’Ajuts Universitaris i de Recerca (AGAUR)

Grup Nanoprobes  
Ismael Díez-Pérez, Pau Gorostiza i Fausto Sanz, Universitat de Barcelona & IBEC  
2014SGR1251, 2014-2016  
Agència de Gestió d’Ajuts Universitaris i de Recerca (AGAUR)

Simulació molecular aplicada (MOLSIMAP)  
Fèlix Lluís Llorell Ferret, IQS, Universitat Ramon Llull  
2014SGR1582, 2014-2016  
Agència de Gestió d’Ajuts Universitaris i de Recerca (AGAUR)
ICREA Acadèmia
Francesc Illas, Universitat de Barcelona
2016-2020
Institut Català de Recerca Avançada (ICREA, Generalitat de Catalunya)

ICREA Acadèmia
Eliseo Ruiz, Universitat de Barcelona
2014-2018
Institut Català de Recerca Avançada (ICREA, Generalitat de Catalunya)

Beca Postdoctoral Beatriu de Pinos.
Jordi Cirera, Universitat de Barcelona
2014-2016
AGAUR (Generalitat de Catalunya)

Beca Postdoctoral Juan de la Cierva.
Jorge Echeverría, Universitat de Barcelona
2016-2018
Ministerio de Economía y Competitividad

Structure and surface composition of Pt-based bimetallic nanoparticles for catalysis and beyond
Konstantin Neyman, Universitat de Barcelona
QCM-2016-2-0020, QCM-2016-3-0015, 2016-2017
Red Española de Supercomputación (RES)

Structure and surface composition of Ni-based bimetallic nanoparticles as catalysts
Konstantin Neyman, Universitat de Barcelona
QCM-2015-3-0012, QCM-2016-1-0006, 2015-2016
Red Española de Supercomputación (RES)

Diseño computacional de pares de bases de ADN artificiales que pueden ser replicados.
Jordi Poater, Universitat de Barcelona
CTQ2016-77558-R, 2017-2019
Ministerio de Economía y Competitividad (MINECO)

Estudio Computacional del Control Mecanoquímico de Reacciones de Interés en Química Biorgánica.
Josep Maria Bofill Villà & Ibério de P. R. Moreira, Universitat de Barcelona
CTQ2016-76423-P, 2017-2019
Ministerio de Economía y Competitividad (MINECO)

Plugging Biomolecules on surfaces.
Ismael Díez-Pérez, Universitat de Barcelona
CTQ2015-71406-ERC, 2015-2016
Ministerio de Economía y Competitividad (MINECO)
III. SCIENTIFIC ACTIVITY OF IQTCUB MEMBERS

Comprension, Control y Optimizacion en Catalisis Heterogenea y Fotocatalisis en la Nanoescala. Aplicacion a la Conversion De Dioxido De Carbono y a la Produccion de Hidrogeno
Francesc Illas Riera i Stefan T. Bromley, Universitat de Barcelona
CTQ2015-64618-R, 2016-2018
Ministerio de Economia y Competitividad (MINECO)

Estructura electrónica y propiedades en moléculas y sólidos.
Eliseo Ruiz Sabín, Universitat de Barcelona
CTQ2015-64579-C3-1-P, 2016-2018
Ministerio de Economía y Competitividad

Estructura electrónica y propiedades de moléculas y sólidos.
Pere Alemany Cahner i Ismael Díez-Pérez, Universitat de Barcelona
CTQ2015-64579-C3-3-P, 2016-2018
Ministerio de Economía y Competitividad (MINECO)

Moduladores fotoconmutables sintéticos para manipular remotamente proteinas endógenas: fotocontrol in vivo de canales iónicos pentaméricos.
Carme Rovira Virgili, Universitat de Barcelona
PCIN-2015-163-C02-01, 2015-2017
Ministerio de Economía y Competitividad (MINECO)

Captura y separación de gases y contaminantes en procesos Industriales sostenibles
Ramón Sayós Ortega i Pablo Gamallo Belmonte, Universitat de Barcelona
Proyectos I+D+I del programa estatal de investigación, desarrollo e innovación orientada a los retos de la Sociedad
Ministerio de Economía y Competitividad (MINECO)

Simulation of reactive processes in proteins and enzymes by means of ab initio molecular dynamics and QM/MM techniques.
Carme Rovira Virgili, Universitat de Barcelona
Ministerio de Economía y Competitividad (MINECO)

FOTOFUEL – New Challenges in the Production of Solar Fuels
Francesc Illas Riera, Universitat de Barcelona
Ministerio de Economía y Competitividad (MINECO)

Mecanismo de transición de fase e interacción magnética en cristales moleculares magnéticos que presentan transición de espín
Mercè Deumal i Juan J. Novoa Vide, Universitat de Barcelona
Ministerio de Economía y Competitividad (MINECO)
Experimentación y modelización computacional de dinámica de reacciones químicas. 
Antonio Aguilar Navarro i Fermín Huarte Larrañaga, Universitat de Barcelona
Ministerio de Economía y Competitividad (MINECO)

Materia blanda forzada, activa y viva.
Jaume Casademunt Viader i Francesc Sagués Mestre, Universitat de Barcelona
Ministerio de Economía y Competitividad (MINECO)

Knowledge Led Structure Prediction for Nanostructures
Scott Woodley, University College London
EP/K038958/1, 2013-2018
Engineering and Physical Sciences Research Council (UK)

Computational modelling and molecular dynamics simulations of oil/water wettability on carbonate rocks and clays
Ramón Sayós Ortega / Pablo Gamallo Belmonte, Universitat de Barcelona
Referència 308465
Contrato de arrendamientos y servicios de I+D con REPSOL, S.A.

COMPHOTOCAT: - Computational design of TiO₂ based nanoparticles for improved photocatalytic activity towards water splitting under visible sunlight
Francesc Illas Riera
Universitat de Barcelona
PRACE - 2014112608, 2015-2016
Partnership for Advanced Computing in Europe (PRACE)

Reducible oxide chemistry, structure and functions
Michael Reichling, Universität Osnabrück
Francesc Illas Riera, (representative of Spain), Konstantin Neyman (deputy representative of Spain),
Universitat de Barcelona
CM1104, 2012-2016
European Framework for Cooperation in Science and Technology (COST)

Explicit Control Over Spin-States in Technology and Biochemistry
Marcel Swart (University of Girona), Carme Sousa Romero (participant of the Universitat of Barcelona)
Universitat de Barcelona
CM1305, 2014-2018
European Framework for Cooperation in Science and Technology (COST)

Materials Networking
Konstantin Neyman, Universitat de Barcelona
European Commission, Ref. Nº 692146, 2016-2019
European H2020 Cooperation Program - Research theme: ‘Twinning’ (H2020)
Design of thin-film nanocatalysts for on-chip fuel cell technology
Konstantin Neyman, Universitat de Barcelona
FP7-NMP.2012.1.1-1, Ref. No.310191, 2012-2016
European FP7 ‘Cooperation’ - Research theme: ‘Nanosciences, nanotechnologies, materials and new production technologies’

Theoretical Chemistry and Computational Modelling
Juan Novoa Vide, Universitat de Barcelona
H2020-MSCA-ITN-2014-642294
H2020, Innovative Training Networks

Theoretical Chemistry and Computational Modelling
Manuel Yanez, Universidad Autonoma de Madrid
TCCM-EJD, 2014-2018
H2020 – ITN, Research and Innovation Framework Programme

A comprehensive and standardised e-infrastructure for analysing medical metabolic phenotype data (PhenoMeNal)
Marta Cascante Serratosa
Unió Europea.

Theoretical Chemistry and Computational Modelling (TCCM)
Juan Jose Novoa Vide
Unió Europea.

Deciphering the Metabolism of Haematological Cancers (HaemMetabolome)
Marta Cascante Serratosa
8P1MCA - H2020. PILLAR 1-EXCELLENT SCIENCE. MCA. Marie Sklodowska-Curie Actions, 2015-2018
Unió Europea.

Enhancing the scientific capacity of the Faculty of Chemistry and Pharmacy at Sofia University as leading regional research and innovation centre in the area of advanced functional materials (Materials Networking)
Konstantin Neyman
Unió Europea.

QUIFIEXP - Química Física Experimental
Jordi Ignes Mullol
GINEO-UB/112, 2016-2019
PPID - Projectes d’Innovació Docent (UB)
NOMAD – Novel Materials Discovery
Matthias Scheffler, Fritz-Haber-Institut der Max-Planck-Gesellschaft, Berlin
**NoMaD - 676580**, 2015-2018
H2020-EINFRA-5-2015, Centers of Excellence for Computing Applications

*Synthesis, characterization, and optical properties of \( LN_{2-x}RE_xWO_6 \) (\( LN=Y^{3+}; \) \( RE= Dy^{3+}, Er^{3+}, Eu^{3+}, Sm^{3+}, \) and \( Yb^{3+} \)) downconversion luminiscent materials and their application in dye sensitized solar cells.*
Jaime Llanos, Universidad Católica del Norte, Antofagasta (Xile)
**Fondecyt Regular nº 1130248**, 2013-2016
Comisión Nacional de Investigación Científica y Tecnológica (CONICYT, Xile)

*Reducible oxide chemistry, structure and functions*
Konstantin Neyman, Universitat de Barcelona (deputy Spanish representative in the Management Committee)
**CM1104**, 2012-2016
European Framework for Cooperation in Science and Technology (COST)

*Single-Molecule studies of photo-conductance on photosynthetic molecular systems by SPM break-junction measurements.*
Ismael Díez-Pérez, Pau Gorostiza, Universitat de Barcelona & IBEC
**FP7-277182**, 2012-2016
FP7-EU

*Developing single-molecule switches for applications in nanoscale organic devices (Single-Molec-Switch).*
Ismael Díez-Pérez, Nadim Darwish, Universitat de Barcelona
**PIIF-GA-2012-328893**, 2013-2016
FP7-EU

*Molecularly Assembled Electrodes.*
Jorge Pavez, Ismael Díez-Pérez (as International partner), Universitat de Santiago de Chile, Universitat de Barcelona
**Fondecyt**, 2013-2017
FONDECYT
Institut de Química Teòrica i Computacional de la Universitat de Barcelona (IQTCUB)

Activity Report 2016
